Request a Socket Module Quote Directly From BPWin

Request a Quote

Send a socket module quote request directly from BPWin when you download the latest version of BPM Microsystems' software. This feature gives you an instant, simple and reliable method to request a quote for the proper socket module that supports your programmable device.

How It Works

By simply clicking on a hyperlinked socket module part number in the BPWin Socket Module Info dialog, you will be directed to a form located on BPM Microsystems' website. The form will automatically populate the manufacturer device part number, programmer model, package type, pin count, and socket module part number specified from your BPWin configuration. All you have to do is type in your name, company name, phone number, email address, country, and quantity to be quoted. The form will then be sent to BPM Microsystems' sales team for review and a quote will be provided to you through BPM Microsystems or the local distributor.

What This Means To You

Rather than conducting time-consuming searches for the right contact information in order to request a socket module quote and lead-time, just download the latest version of BPWin and access the socket module quote request form. Your request will be sent instantly to BPM Microsystems' sales team, saving you valuable time and assuring the proper socket module to support your programmable device is selected.
